Golden Goal

Basic Skills & Communication Training
with Integrated Sport Activities

PREFACE

The Golden Goal project aims at empowering young disadvantaged adults all over Europe with improved literacy, numeracy and language skills, as well as with different social and communication skills. Focusing on the specific requirements arising from their environment, the innovative approach of the Golden Goal model matches the use of the sporting interests of young disadvantaged adults with the use of sports as an underlying pedagogical method.

The project partnership developed this “Curriculum for Basic Skills Training for Young Disadvantaged Adults in Combination with Sport Activities” primarily to inform people responsible for the design of adult education measures and stakeholders in education policy on how sports activities can be introduced into basic skills training, enriching the respective learning contents.

The “Tool Box for Introducing Sport Activities into Adult Basic Skills Education”, a complementary product, is designed for adult education organisations and vocational training institutions and, in addition, educational, vocational and social counsellors and tutors. The collection of materials and methods can thus be used for a wide variety of measures and interactions.
